

Gibson Island

- ▶ Gibson Island makes up one half of IPL's Brisbane Operations, the other being its Pinkenba site. Between the two, it runs two Product Distribution Centre's (PDC'S) and manufacturing plants.
- ▶ Our Brisbane manufacturing plants produce ammonia, urea, CO₂ as well as granulated products.
- ▶ Gibson Island is also the headquarters of our Dyno Nobel Asia Pacific business.
- ▶ Gibson Island PDC despatches approximately 550,000 tonnes of fertilisers each year for Incitec Pivot Fertilisers' customers.
- ▶ The Gibson Island urea plant is the only high pressure urea plant operating in the world, with reactor pressure of 450 atmospheres.
- ▶ The site also has a 160tpd Liquid Carbon Dioxide Plant that supplies half the liquid CO₂ in Queensland and is the main source for CO₂ in carbonated soft drinks in Qld and northern NSW.
- ▶ There are approximately 400 employees working between the Gibson Island and Pinkenba sites. Dyno Nobel Asia Pacific employs approximately 45 people at Gibson Island.
